

devops2-endterm

Single-node Kubernetes platform · mka1ybek · 2026-05-06

Topology

VM 172.20.10.4 · Ubuntu 25.10 · arm64 · 4 CPU

Kubernetes 1.32 · kubespray · containerd ·
Calico CNI · CoreDNS · iptables kube-proxy

SSH port-forward

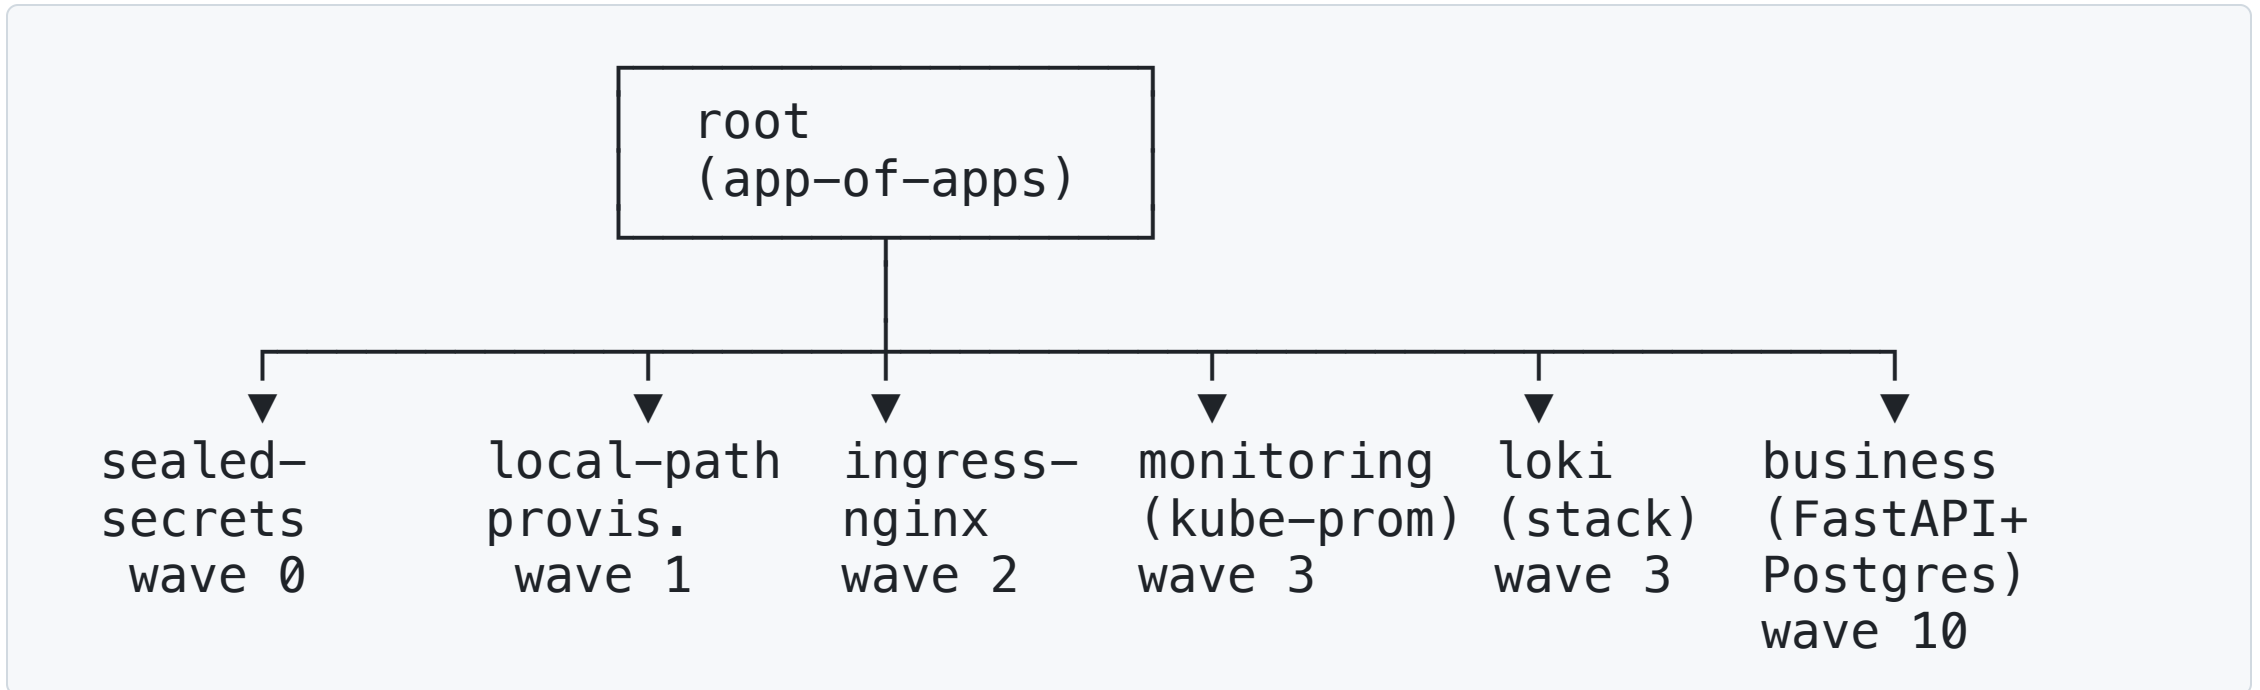

Mac (kubectl + git)

1 node = control-plane + worker · taint removed · single-node mode

Components by layer

Layer	Component	Purpose
Cluster	kubespray + Ansible	declarative cluster install
Runtime	containerd, Calico, CoreDNS	CRI / CNI / DNS
GitOps	ArgoCD v3.0.0	app-of-apps from <code>mka/lybek/devops2-endterm</code>
Secrets	sealed-secrets	encrypt creds at rest in git
Storage	local-path-provisioner	dynamic PVCs (default SC)
Ingress	ingress-nginx (NodePort 30080)	north-south traffic
Metrics	Prometheus + Alertmanager + Grafana	kube-prometheus-stack

ArgoCD app-of-apps

Sync-waves enforce ordering · `automated{prune,selfHeal}` · `ServerSideApply`

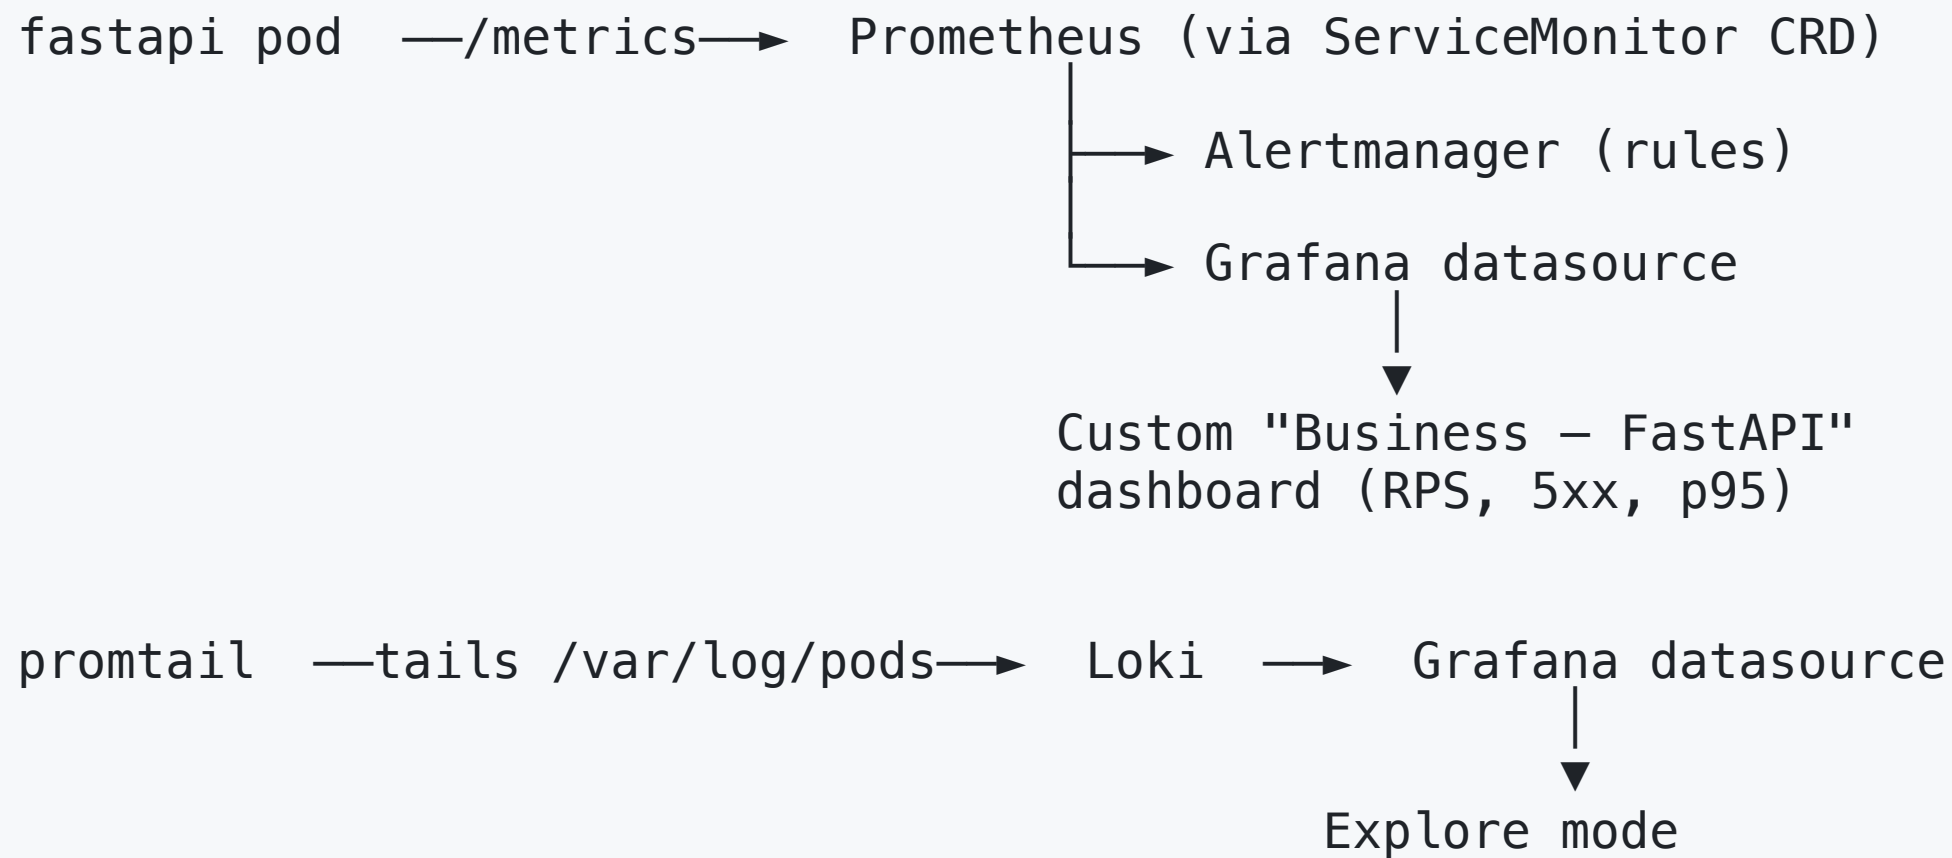

Security guardrails

Control	Where
NetworkPolicy default-deny + 6 explicit allows	business ns
SecurityContext runAsNonRoot, readOnlyRoot, drop ALL caps	every container
ResourceQuota 2 cpu / 2 Gi req · 4 cpu / 4 Gi limit	business ns
LimitRange per-container defaults	business ns
PodDisruptionBudget minAvailable: 1	fastapi
SealedSecret encrypted DB creds in git	bitnami sealed-secrets
RBAC kubeconfig with X.509 client cert	kubespray PKI

Business app — request path

Observability — metrics flow

`prometheus-fastapi-instrumentator` → RED metrics for free

Live access

```
export KUBECONFIG=$(pwd)/kubeconfig

# ArgoCD UI          admin / v0Hjzf9EQ8lHFaSa
kubectl -n argocd port-forward svc/argocd-server 8081:443

# Grafana            admin / admin
kubectl -n monitoring port-forward svc/monitoring-grafana 3000:80

# Business app (чеpez VM)
ssh root@172.20.10.4 'curl -s -H "Host: business.local" http://127.0.0.1:30080/items'
```

Demo scripts

```
bash scripts/verify.sh           # full health snapshot
bash scripts/demo-netpol.sh      # prove NetworkPolicies deny
bash scripts/demo-zero-downtime.sh 2.0.0 # rolling update with 0 downtime
```

demo-zero-downtime.sh запускает curl loop в фоне · бампит image tag в git · ArgoCD reconcile → RollingUpdate maxUnavailable=0 → 100% 200 OK во время rollout
